Citrix Workspace
Delivery Solutions

Citrix is leading the transition to software-defining the workplace to enable new ways for businesses and people to work better. Citrix market-leading solutions power business mobility through secure mobile workspaces that provide people with instant access to apps, data and communications on any device, over any network and cloud.
Citrix is a leader in secure workspace delivery. The company provides virtualization, mobility management, networking and SaaS solutions that offer people instant access to apps, data and services for anytime, anywhere experiences to produce great results.

**Mobile workspace**

**Citrix Workspace Suite™** is the market-leading solution for the secure delivery and management of apps, data and services to any device, over any network. Citrix Workspace Suite combines key technologies, including app and desktop virtualization, mobile app and device management, native mobile productivity apps, enterprise file sync and share and WAN optimization, with the management control needed to protect corporate resources and ensure a secure mobile workspace for every employee within an organization.

**App & desktop virtualization**

**Citrix® XenApp®** is the industry-leading solution for virtual application delivery, providing Windows apps to any device with the best user experience, security and manageability. With XenApp, IT can centralize management and control of Windows apps while providing mobility and a high-performance experience optimized for the type of device, as well as the network. XenApp is built on a cloud-enabled architecture to enable IT to securely deliver published apps on premises or in the cloud for maximum efficiency.

**Citrix XenDesktop®** is the most complete desktop virtualization solution, integrating all the capabilities of XenApp, extended to VDI, on a powerful, unified platform. It can address worker and business computing needs by delivering full desktops or apps on demand to any device, anywhere. XenDesktop is built on a cloud-enabled architecture that offers powerful management tools to simplify scalability, increase infrastructure flexibility and automate the delivery of apps and desktops.

**Enterprise mobility management**

**Citrix XenMobile®,** the most comprehensive enterprise mobility management (EMM) solution, includes mobile device management (MDM), mobile application management (MAM) and enterprise-grade productivity apps. Users enjoy single-click access to all their apps from a unified corporate app store, and IT can easily configure, secure and support mobile devices to meet compliance and control requirements. XenMobile securely delivers Citrix Worx apps, the industry’s largest collection of business apps, which are fully containerized on a mobile device, separate from personal apps, for enhanced productivity and a rich user experience.
Enterprise file sync and share
Citrix ShareFile® is an enterprise-class solution that enables people to securely share files with anyone inside and outside the organization and keeps data synchronized across all devices. IT has the flexibility to choose where data is stored – on premises, in the cloud or a combination – to meet data security and compliance requirements of the business.

Collaboration
Citrix GoToMeeting® makes it simple and cost-effective to connect and share ideas with colleagues, prospects and customers using instant, face-to-face online video conferencing and screen sharing. With GoToMeeting, people can collaborate from anywhere, eliminating geographical boundaries.

Citrix GoToAssist® is a comprehensive and secure remote support solution that helps businesses increase revenue and reduce costs while improving customer satisfaction and problem resolution times. GoToAssist makes it easy for service representatives to quickly and efficiently install applications, troubleshoot technical difficulties and receive expert advice from team members over a secure online connection with the customer or end user.

Networking & cloud
Citrix NetScaler® is the industry’s leading web and application delivery controller that optimizes, secures and controls the delivery of applications and services in thousands of networks around the globe. Available as either a physical or virtual appliance platform, NetScaler significantly improves mobile network and application performance along with network visibility, while tightening security for both the enterprise and the end user.

Citrix CloudBridge™ provides a unified platform that connects and accelerates application service delivery and optimizes bandwidth utilization across third-party public clouds and private networks to ensure optimal performance for branch office and mobile users. The CloudBridge Virtual WAN solution can cost-effectively scale WAN bandwidth to meet the needs of virtual desktop, video and SaaS-based applications while ensuring reliable connectivity.

Citrix XenServer® is a leading server virtualization platform, built on open source technology, for cost-effective cloud, server and desktop virtualization infrastructure. Organizations of any size can install XenServer in less than 10 minutes to virtualize even the most demanding workloads. XenServer provides a rich set of management and automation capabilities designed to optimize private datacenters and clouds today and in the future.

Citrix CloudPlatform™, powered by Apache CloudStack®, is the industry’s leading application-centric cloud solution proven to reliably and efficiently orchestrate both traditional enterprise and cloud-native application workloads within a single, unified cloud management platform. This turnkey solution allows customers to leverage existing virtualization and hardware investments and provides the scale, elasticity and efficiency to run even the most complex workloads.
